How to Use Pokemon Go Spoofer (Step-by-Step Guide)

After downloading and installing a VpN on your mobile device, you also need to install a GpS spoofing app as well. Android: Choose a VpN and register for the service. We recommend choosing NordVpN. Download and install the VpN on your mobile device. You can find NordVpN in the Google play Store. Go back to the Google play Store and download the Fake GpS Location app. Now, visit your Android devices settings. Once in settings, click bout phone joystick without ever leaving the game itself. Since this is a simple overlay we do not make any

When you spoof the GPS location on your Android or iOS phone and then open Pokemon Go, the app thinks you're in the new location. That means it will generate Pokemon associated with that new area, and you'll also be able to take part in special events and gym battles based on the spoofed location.

Tap Build Number seven times. This will turn on developer mode. Go back to settings and visit Developer Options. Click the option that says Mock Locations App or Allow Mock Locations.

Now, youll need to install a module named Mock Mock Locations. This is to stop apps like pokemon GO from figuring out that you have mock locations enabled. Download Mock Mock Locations here, from the Xposed Module Repository. Turn on Mock Mock Locations. Now turn on your VpN on your mobile device and choose a server in a location where you would like to find pokemon. Make sure youve turned on the spoofing app and choose a location there as well, ideally the same location so that your Ip address aligns with your GpS. Then “you are good to go. Turn on pokemon GO and start searching for your favorite pokemon like Gengar, Snorlax, and Pikachu.

It’s important to understand the basics. Pokémon GO uses GPS data, device sensors, and behavior patterns to detect unusual activity. While spoofing is possible on iOS, the method you choose matters a lot.

In general, PC/Mac-based spoofers are considered safer than modified game apps, tools that work with the official Pokémon GO app reduce detection risk, proper cooldown timing is critical to avoid soft bans. With that in mind, let’s look at the most talked-about iOS Pokémon GO spoofers.

How to Spoof Safely Without Getting Banned

Spoofing can be risky if you move too fast or behave in ways that look unnatural. Pokémon GO has anti-cheat systems, so safety matters.

Here are smart tips to reduce risk:

Follow Cooldown Rules

If you teleport far away, don't immediately catch Pokémon or spin PokéStops. Wait a realistic amount of time.

Avoid “Jumping” Too Frequently

Constant teleporting every few minutes can look suspicious. Try staying in one area longer.

Use Walking Speed, avoid moving too fast

When using route simulation, keep movement realistic. Walking speed is usually safer than fast driving speed.

Don't Use Modded Pokémon GO Apps

Many bans happen because players use modified versions of the game. A safer method is using a GPS tool while keeping the official Pokémon GO app.

Don't Spoof During Big Events Too Aggressively

During events, activity is monitored more closely. Be extra careful. In conclusion, a Pokémon GO spoofer offers a tempting way to explore the game without physical limitations, but it comes with significant risks. From potential bans to security concerns, the downsides can outweigh the benefits for many players. While spoofing may provide access to rare Pokémon and global events, it is important to consider whether it aligns with your long-term goals in the game. Playing fairly not only ensures account safety but also preserves the authentic experience that makes Pokémon GO enjoyable in the first place.
